

How each added joint is tied to the mesh

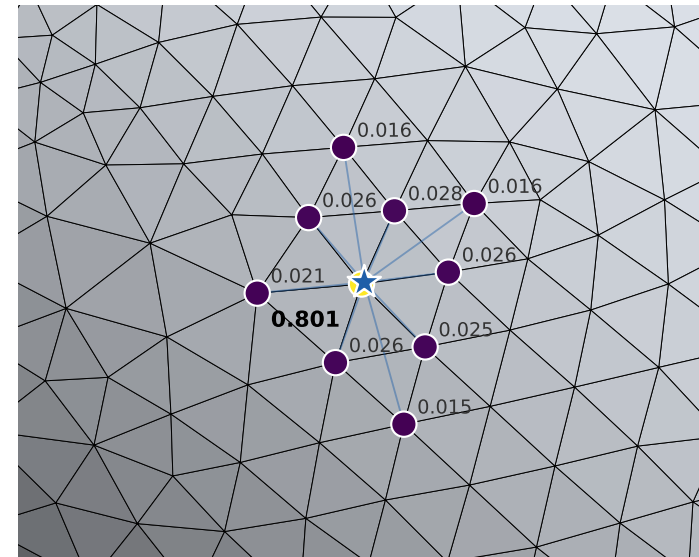

A the two joints on the template head (full-face)

B b_h_l — its 10 vertices and weights

C b_h_r — its 10 vertices and weights

joint on any registered specimen: $\mathbf{j} = \sum_{i=1}^{10} w_i \mathbf{v}_i$, $w_i = \frac{1/d_i}{\sum_k 1/d_k}$, d_i = distance of template vertex i to the placed bone (★ = joint; the same linear form as SMIL's $J_{\text{regressor}}$)
