

Where each problem lives, and how far it was taken

	geometry	correspondence	pose	anatomy	measurement	status
mesh topology	✓					solved / controlled
leg correspondence		✓				bounded
proximal pose			✓			bounded
anterior deformation				✓		controlled
landmark identity				✓	✓	unresolved
absolute scale					✓	excluded from biological analysis

Anatomical identity is the one unresolved frontier; absolute scale is excluded by identifiability, not by difficulty.
